Remediation Roadmap

Fix XSS

Fix CSP

Privacy Summary

Passive Analysis Only: This report was generated using purely observational, non-intrusive techniques. Surface-Q captures and analyzes network metadata, DOM structure, and HTTP headers broadcasted publicly by the target server.

Data Segregation: Surface-Q DOES NOT collect, transmit, or analyze passwords, session tokens, cookie values, or any personally identifiable information (PII). No payloads were injected, and no active vulnerability exploits were attempted during this scan.
